
000002.jpg

Original caption

a sky with clouds women's v - neck

Type A — Spatial scene description

The image depicts a mannequin wearing a women's pink V-neck top. The mannequin is positioned centrally in the foreground. The backdrop is a blue sky with several scattered white clouds, covering the entire background and stretching from the left to the right edges. The distance between the mannequin and the sky suggests the mannequin is close to the camera, while the sky appears far and forms the distant background, with no other objects visible in the scene.

000010.jpg

Original caption

a maroon jumper that has a small patch in the front and long sleeves in the back

Type A — Spatial scene description

The image shows a maroon jumper centrally positioned, hanging on a wooden hanger. The jumper has a relaxed fit with a slight high-low hemline, where the back is longer than the front. A small patch pocket is visible on the left side of the chest area. The hanger's hook is attached to a surface that is not visible, suggesting the jumper is hanging fairly close to the background. There are no other objects present in the scene, and the background is a plain off-white, providing clear visibility of the jumper’s details.

Type C — Action-conditioned

I am approaching a maroon jumper that hangs on a wooden hanger. The optimal grasping point is the top of the hanger, where it's thinnest and most stable. There are no immediate obstacles around the hanger itself, allowing for a direct approach. The jumper's fabric requires gentle handling to avoid deformation. Once grasped, I can lift the jumper vertically off the hanger. The clearest placement zone for this item is a flat, spacious area nearby, preferably clear of other objects to ensure it remains clean and untangled.

000026.jpg

Original caption

two silver bells with ribbons and ribbons

Type B — Object-centric referring

Object: Top-left bell
Referring: The silver bell at the top-left corner with a heart-shaped handle and a white ribbon.
Free space: There is free space around the top and left sides of the bell, with a similar bell placed to its right.

Object: Top-right bell
Referring: The silver bell at the top-right corner with a heart-shaped handle and a white ribbon.
Free space: The bell has free space on its top and right sides, with the left side close to another similar bell.

Object: Box of bells
Referring: The clear box located at the bottom center, containing multiple silver bells inside.
Free space: The box has free space above it, with no objects physically touching it.

Type C — Action-conditioned

Upon analyzing the scene, I observe two silver bells with heart-shaped handles, each adorned with a bow. The optimal approach for grasping each bell is from above, targeting the handles, as it avoids the delicate bows and ensures a secure grip. The nearby package, containing additional bells, poses a minor obstacle and should be navigated carefully to prevent collisions. The clearest placement zone on the surface is in the center area in front of the package, which is free from obstructions and provides enough space for arranging the bells without interference. Proceeding with caution will ensure the safe handling and placement of these items.

000003.jpg

Original caption

the brain coffee mug

Type A — Spatial scene description

The image shows a white ceramic coffee mug positioned slightly to the right of the center. The mug has a design featuring text that reads "THE BRAINS" along with a black silhouette of a person in a suit. The text and silhouette are located centrally on the visible side of the mug. The handle of the mug is visible on the right side, indicating the mug is facing outward. There are no other objects in the scene, and the mug appears to be on a flat, white surface. The background is plain and white, suggesting a neutral setting with no visible objects immediately near the mug.

Type C — Action-conditioned

In this scene, my task is to grasp the coffee mug. The best approach direction for the mug is from above, aligning with the handle for a secure grip. I must avoid any lateral movement that could tip the mug or spill its contents. There are no immediate obstacles around the mug, providing a clear path for grasping and lifting. The ideal placement zone on the surface is to the right of the mug, as it appears unobstructed and stable for setting down the mug safely. I will ensure precision in my movements to avoid knocking against any unforeseen objects.

000025.jpg

Original caption

yellow vintage car ipad mini cases

Type A — Spatial scene description

The image displays a close-up view of an iPad Mini case featuring a design of a yellow vintage car. The car is centrally positioned on the case, facing forward. The background is plain, allowing the car design to stand out prominently. The front of the car is near the bottom center of the case, with the top part extending towards the top center. The sides of the car design reach towards the edges of the case, creating the appearance of the car occupying most of the available space. There are no additional objects or designs surrounding the car on the case. The focus remains entirely on the vehicle, with minimal distance between the car design and the edges of the case itself.

Type B — Object-centric referring

I'm unable to view the image directly, but I can guide you on how to annotate it.

For annotating an image with distinct objects, follow this structure for each object you observe:

1. **Object: Car**
   - **Referring:** "The prominent yellow vintage car in the foreground of the image."
   - **Free space:** "There is ample space around the car, with room for maneuvering."

2. **Object: iPad Mini Cases**
   - **Referring:** "The small collection of iPad Mini cases placed in the lower-left corner."
   - **Free space:** "The cases are closely grouped together with clear space surrounding them on all sides."

Describe each object in terms of its unique characteristics and its surrounding environment based on these guidelines. If there are other objects in the scene, repeat the process for each one.

Type C — Action-conditioned

As a robot arm prepared to interact with the yellow vintage car iPad mini case, I aim to approach the case from above, ensuring a secure grasp around its edges. The nearby obstacles include other iPad cases and small decorative items that could hinder lateral access. Careful precision is needed to avoid these while grabbing the target object. The clearest placement zone is to the right side of the workspace, where ample space is available, free from obstructions, allowing for a safe and precise placement of the iPad mini case once lifted.

000001.jpg

Original caption

the view of an aerial pool with palm trees

Type A — Spatial scene description

The image depicts an outdoor resort area centered around a pool. In the middle of the scene is the pool, surrounded by landscaped greenery. Surrounding the pool to the left are poolside seating areas with several umbrellas. To the far left, there's a multi-story building partially obscured by trees. Two individuals are visible on a raised platform near the building. Palm trees are dispersed throughout the scene, with the most prominent one centrally positioned in the foreground, adjacent to the pool. The right side of the image features a coastline with water extending towards the horizon, indicating a seaside setting. In the foreground to the right, there is a dining area with a person at a table. The overall layout suggests a tranquil atmosphere amidst natural surroundings with built structures primarily on the left.

Type B — Object-centric referring

Object: Pool
Referring: The large irregularly shaped pool in the center foreground with blue water.
Free space: The area around the pool has open space with lounge chairs and pathways.

Object: Palm Trees
Referring: The tall palm trees extending from near the pool, reaching into the upper half of the image.
Free space: There is ample space around each tree with clear views to the sky.

Object: Building
Referring: The multi-story building on the left with balconies and greenery on top.
Free space: The building stands with a clear open area in front, including pathways and vegetation.

Object: Ocean
Referring: The expansive body of water visible at the right edge of the image.
Free space: The ocean fronts the scene with an unobstructed view, blending into the horizon.

Object: Deck Area
Referring: The elevated deck area on the left with people standing, adjacent to the building.
Free space: Surrounding the deck is open space featuring pathways and greenery.

Type C — Action-conditioned

I'm analyzing the scene with a focus on optimal interaction points. For the poolside lounge chairs, an

approach from above is ideal, ensuring avoidance of nearby umbrellas and guests. The palm tree trunks should be approached laterally to avoid overhead branches and surrounding foliage. For potted plants on the ground, a side approach is best, steering clear of the water's edge. The clearest placement zone is the flat concrete area near the building, with ample space and few obstructions.

000019.jpg

Original caption

rihanna walks into the airport with her family

Type A — Spatial scene description

The image shows a group of five people walking out of a glass door at an airport. On the far left, a bald man in a light blue shirt leads the group. To his right, slightly behind him, is another man in a gray hoodie guiding a young person wearing a black outfit and cap, who is in the center. The young person is holding a red backpack in their left hand. Just to the right of them, another man in a light gray hoodie is close by, carrying a backpack on his shoulder. Another person is partially visible further back, just behind the group. The group is in close proximity to each other, indicating they are walking closely together. The background shows the airport interior with glass reflecting light, contributing to a sense of depth.

000006.jpg

Original caption

the blue sedan is parked on a street

Type C — Action-conditioned

As a robot arm preparing to interact with this scene, my primary target is the blue car. The best approach direction for grasping the car is from the sides, especially near the wheel arches, as they provide a sturdy structure to grip. I must be cautious of the adjacent white SUV and the surrounding parked vehicles to avoid collisions. The clearest placement zone on the surface for maneuvering or temporarily placing tools is the open street area in front of the blue car, as it appears unobstructed by other objects or vehicles.

000016.jpg

Original caption

custom seat covers sued for chevrolet c350

Type A — Spatial scene description

The image shows two car seats positioned in the foreground. The left and right seats are positioned near each other with a small gap between them. In the center, there is a console with cup holders, situated slightly forward relative to the seats. The seats appear aligned side by side, sitting on a shared base, approximately a few inches apart from each other. The seats are angled slightly away from the center console. There are no other objects visible in the image.

Type C — Action-conditioned

As a robot arm prepared to interact with this scene, I see three primary objects: two seat covers and a center armrest console. For the left seat cover, the best approach is from above, targeting the top edge where it can be easily gripped without obstructing nearby elements. The right seat cover can similarly be approached from above, maximizing grip on the upper section. The center console, positioned between the seats, requires a vertical approach from directly above to avoid the adjacent seat surfaces. There are no significant obstacles on top of the seats themselves, offering a clear and smooth surface for placement. The clearest zone for manipulating these objects without obstruction is directly above each target object's top surface.

000009.jpg

Original caption

a model wears an elaborate creation of white paper at the berlin fashion week on march 5, 2009 in

000018.jpg

Original caption

rustic wood and leather address business card

Type C — Action-conditioned

As a robot arm assessing the business card on a rustic wood surface, my optimal approach for grasping is from the top, targeting the outer edges to avoid smudging or covering important information. The corners offer a secure grip point without causing damage. There are no immediate obstacles on the flat surface, ensuring unobstructed access for picking up the card. The clearest placement zone appears to be the top left corner of the wooden surface, which is free from visual elements or debris, providing ample room for precise and easy placement. This plan should ensure efficient interaction with the card while maintaining the integrity of its presentation.

000015.jpg

Original caption

the pendleton blazer with button

Type A — Spatial scene description

The image shows a close-up view of fabric material with a woven pattern consisting of horizontal stripes in various colors, including yellow, brown, blue, and white. On the left side of the image, near the center, there is a large circular button with a two-hole design, featuring a dark brown and cream pattern. The button is directly attached to the fabric, with stitching visible through the holes. The fabric's texture appears coarse, and the button is positioned approximately one to two centimeters from the nearest visible edge of the fabric. The button and fabric dominate the image with no other objects visible.

Type C — Action-conditioned

As a robot arm, my main task is to interact with the button on the Pendleton blazer. For optimal grasping, I will approach the button from above at a slight angle to ensure a firm grip, avoiding any slippage on the smooth surface. The fabric around the button is slightly textured and should be considered when securing my grip to avoid snagging. Nearby, the textured surface of the blazer presents an obstacle; extra caution is necessary to avoid disturbing the fabric. The clearest placement zone is to the right of the button where the fabric pattern is uniform, providing a stable area to rest or manipulate other objects if needed.

000029.jpg

Original caption

a blue electronic calculator

Type B — Object-centric referring

Object: Calculator
Referring: The blue electronic calculator occupying the majority of the image, positioned slightly to the left and with a metallic finish.
Free space: There is free space around the calculator, especially noticeable at the top and right side, where the white background is visible without obstruction.

Type C — Action-conditioned

The target object is a blue electronic calculator, which ideally should be approached from directly above for grasping. This direction allows the robotic arm to firmly pinch the edges of the calculator using its gripper, minimizing the risk of slippage. There are no nearby obstacles, making the approach straightforward. The clearest placement zone on the surface is to the right of the current position, where there's ample space to securely place the calculator without interference.

000021.jpg

Original caption

an aqua and gold lamp sitting in a room

000011.jpg

Original caption

two male basketball players sit in the middle of a crowd

Type C — Action-conditioned

As a robot arm, I am assessing the scene for optimal interaction. The basketball on the floor near the seated players can be grasped best from above, avoiding nearby legs and the seated players. The Gatorade bottle beside the court is most accessible from the side, steering clear of players' feet as obstacles. The clipboard on the bench is reachable from the top corner, with potential interference from the hands of seated individuals. The clearest placement zone for any relocated object is to the far side of the bench where there is ample empty space. All movements must be carefully coordinated to avoid physical contact with people and maintain smooth operation amidst the crowded setting.

a white sofa is next to a glass table

000017.png

Original caption

a home decor mood board with white linen intentions

Type C — Action-conditioned

As a robot arm preparing to interact with this scene, my optimal approach involves identifying each object's orientation and surrounding obstacles. For the curtains, I will approach from the top, taking care to avoid entanglement with the rod. The umbrella can be grasped along its central pole with a vertical descent, mindful of the artwork nearby. The vases and candle holders are best approached from above, avoiding contact with nearby decor. For the baskets and wicker chair, I will maneuver from the side to maintain stability, steering clear of the rugs underneath. The table can be gripped from its edges, ensuring I do not disturb the surrounding area. The surface offers a clear placement zone near the striped rug, allowing ample space for organized arrangement.
